

PhyloNet

*one command per
analysis, invoked
from a NEXUS block*

InferNetwork_ML

InferNetwork_MPL

MCMC_GT

MCMC_SEQ

MLE_BiMarkers

MCMC_BiMarkers

InferNetwork_MP

InferNetwork_MP_Allopp

*each command
parses its own input,
runs its own search,
owns its scorer*

PhyNetPy

*two verbs over a product of three axes;
a method is a cell, not a command name*

*same methods,
reorganised* →

	MDC	Likelihood	Pseudo-likelihood	Bayesian
<i>model = MSC</i>				
GeneTrees	—	ML	MPL	MCMC_GT
Alignment	×	—	×	MCMC_SEQ
BiallelicMarkers	×	MLE	—	MCMC

model = Allopolyploid

GeneTrees	MP_Allopp	—	—	—
-----------	-----------	---	---	---

■ implemented □ legal, not yet built (—) ■ not defined for this data type (×)

shared by every cell: network representation, topology moves, search drivers, parameter optimiser, I/O, chain diagnostics
